

Transparency

Transparent: The materials which allow light through them completely. Thus, materials are called as transparent. For example: Glass, plane glass, lens etc.

Opaque: The materials which do not allow light through them completely. Thus, materials are called as opaque. For example: wood, book, wooden table etc.

Translucent: The materials which allow light through them partially. Thus, materials are called as translucent. For example: Oily paper, cellophane sheets etc.
