

## Touch Screen

A touch screen is a special video display screen. Input is given to the computer directly by touching the screen with user fingertip. Most touch screen computers use sensors in the computer's screen to detect the touch of a finger. Usually touch screen used to make selection from a menu of choices displayed on the screen. Touch screen is often used in ATM. Touch screen systems are also used in restaurants, supermarkets, departmental stores etc.

In some computer systems, pen-based or light pen input devices are used. The user touches the screen with a pen. However, the term touch screen implies a system that accepts input data by touching the screen with the user's fingertip.
