

OBJECTED APPROACH

Some of the features of OOP are:

- (1) Emphasis is on data rather than procedure.
 - (2) Program is divided into objects.
 - (3) Data structures are designed such that they characterize the objects.
 - (4) Functions that operate on the data are tied together in the data structure.
 - (5) Data is hidden and cannot be accessed by external functions.
 - (6) Objects may communicate with each other through functions.
 - (7) New data and functions can be easily added whenever necessary.
 - (8) Follows bottom-up approach in program design.
