Configuring E-mail

- First go to **Tools Menu** and then choose **Account** option
- Internet Accounting dialog Box comes up with 4 tabs as All, Mails, News, and lastly Directory Service.
- Select **Mail Tab** and then click on **Add** button, which opens up with various options to select.
- Click Mail, which displays the Internet Connection Wizard.
- Type in the name and click **Next.**
- Type in the E-mail Address or you would type in the ISP mail ID and click Next.
- The first category is about your Incoming Mail Server, which can be POP3, IMAP or HTTP etc.
- The second category is out going mail server, which you will use for sending E-Mails outside and then click **Next.**
- Type in the **Account Name**, which is an identification of E-Mail ID then type in the **Password** and click **Next**.

- The message of successful completion appears on the screen.
- Finally, click **Finish** Button.

Note: You can make 2 types of accounts.

- Either through Mail Server or,
- Use e-mail ID that has been given by Internet Service Provider.
