

# Microphone

Besides the regular Text input, we also have another form of Input i.e. Sound Input.

Recording sounds with the computer requires special equipment; the Microphone.

**Microphone** can capture sounds from the air to record music, sound effects or voices.

There are different ports available in the Sound Card. These ports allows connecting a Microphone for recording speech and other devices.

**Note:-** *For recording music, the best results come from using a musical instrument that is connected directly to the computer.*
