

Internal Organs of The Human Body

A. Choose the correct answer:

1. Which organ pumps blood to the entire body?

- A) Lungs
- B) Heart
- C) Stomach
- D) Brain

2. What is the main function of the lungs?

- A) To help us see
- B) To digest food
- C) To breathe in oxygen and remove carbon dioxide
- D) To pump blood

3. Which organ helps in digesting food?

- A) Liver
- B) Heart
- C) Stomach
- D) Lungs

B. Fill in the Blanks:

1. The _____ is the largest internal organ in the human body.
2. The _____ controls all the activities of the body.
3. The _____ help in filtering waste from the blood.

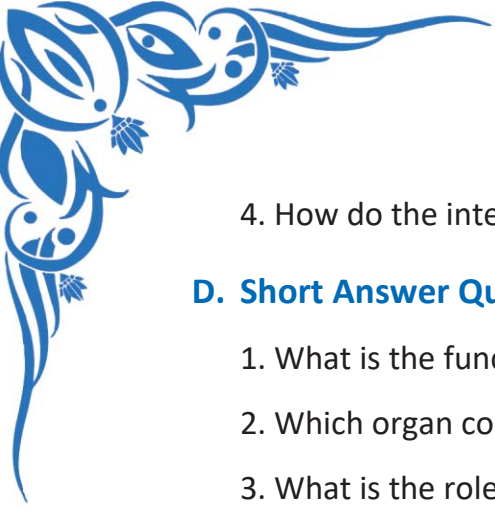

C. Case Study:

Riya went to the doctor with a stomach ache. The doctor explained that her stomach helps break down food into smaller pieces. The doctor also said that the liver and intestines help with digestion by releasing special juices.

After the check-up, Riya learned the importance of drinking enough water and eating healthy food to keep her digestive system strong.

Case Study Questions:

1. Which internal organ was causing Riya's stomach ache?
2. What is the function of the liver in digestion?
3. Why is it important to drink water for a healthy digestive system?

4. How do the intestines help in the digestion of food?

D. Short Answer Questions:

1. What is the function of the heart?
2. Which organ controls our thoughts and memory?
3. What is the role of the kidneys in the human body?

E. Long Answer Questions:

1. Describe the functions of the brain, heart, and lungs in the human body.
2. Explain how the stomach, liver, and intestines work together during digestion.
3. Why is it important to keep our internal organs healthy? List some ways to take care of them.
