

Operators and Its Type

Q1- Explain operator used in programming language.

Ans1- Operators are symbol which is used in any programming language to perform mathematical and relational operation and produced final result.

Q2- write the short notes on arithmetic and relational operator.

Ans2- Arithmetic operator- This operator used to perform any mathematical task. Ex- +, /, *, -.

Relational operator- Also used as comparison operator, compare left side value to right side value =, <, > etc.

Q3- write short notes on bitwise and assignment operator.

Ans3- Bit wise operator- this operator is used to perform binary operation. Same as AND, OR operation. Ex- &&, ||, !.

Assignment operator- Assign the left side value is equal to right side value. Ex- =, <=, >= etc.
