

Estimating Measures in Length, Weight and Volume (Capacity)

1. A shopkeeper bought 34 kg sugar and 44 kg kidney beans from the market. Estimate the total weight.

2. One bottle contains 354 ml coconut oil and another bottle contains 995ml coconut oil. Estimate the total quantity of coconut oil in both cans.

3. The lengths of three metros are 365 m, 205 m and 415 m respectively. Estimate the sum of the lengths of the three metros.

4. The distance between two places A and B is 3450 km and the distance between two places C and D is 5125 km. Estimate the difference these places.
