

Birds take care of their young ones

A. Choose the correct answer :

1. How do birds keep their eggs warm?

- A) By sitting on them
- B) By covering them with leaves
- C) By splashing water on them
- D) By keeping them in the sun

2. What do parent birds feed their chicks?

- A) Stones and leaves
- B) Insects, worms, and seeds
- C) Grass and twigs
- D) Sand and water

3. Where do birds build their nests?

- A) In water
- B) On the ground
- C) On trees, cliffs, or buildings
- D) In the clouds

B. Fill in the Blanks:

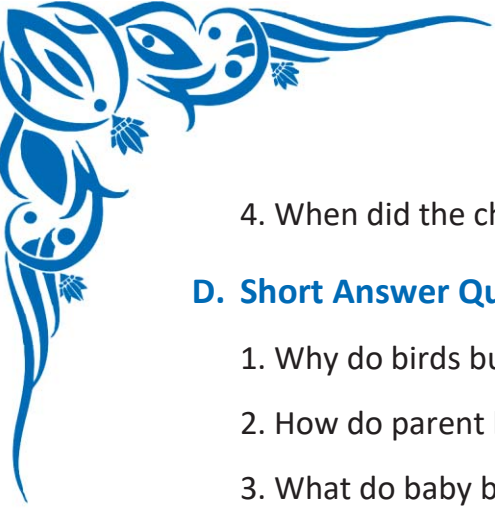

1. Birds build _____ to keep their eggs safe.
2. Parent birds bring _____ and _____ to feed their chicks.
3. Baby birds stay in the nest until they learn to _____.

C. Case Study:

A sparrow made a nest in a tree. She laid three eggs and kept them warm by sitting on them. After a few days, the eggs hatched, and three tiny chicks came out. The sparrow brought insects and small seeds to feed her young ones. She protected them from rain and strong winds by covering them with her wings. After a few weeks, the chicks grew strong and started to fly.

Case Study Questions:

1. What did the sparrow do to keep the eggs warm?
2. What food did the sparrow bring for her chicks?
3. How did the sparrow protect her chicks from bad weather?

4. When did the chicks leave the nest?

D. Short Answer Questions:

1. Why do birds build nests?
2. How do parent birds protect their young ones?
3. What do baby birds need to grow strong?

E. Long Answer Questions:

1. Describe how birds take care of their eggs and young ones until they learn to fly.
2. Explain why it is important for birds to protect their nests from predators.
3. Write about the different materials birds use to build their nests and how it helps their babies.
