

# TRIANGLES

## CRITERIA OF CONGRUENCE OF TRIANGLE

### EXERCISE

- Q.1** Prove that diagonal of a parallelogram divides it into two congruent triangles.
- Q.2** In Fig. it is given that  $AB = CF$ ,  $EF = BD$  and  $\angle AFE = \angle DBC$ . Prove that  $\triangle AFE \cong \triangle CBD$ .

- Q.3** In Fig. X and Y are two points on equal sides AB and AC of a  $\triangle ABC$  such that  $AX = AY$ . Prove that  $XC = YB$ .

- Q.4** In Fig. PQRS is a quadrilateral and T and U are respectively points on PS and RS such that  $PQ = RQ$ ,  $\angle PQT = \angle RQU$  and  $\angle TQS = \angle UQS$ . Prove that  $QT = QU$ .

- Q.5** In Fig.  $PS = QR$  and  $\angle SPQ = \angle RQP$ . Prove that  $PR = QS$  and  $\angle QPR = \angle PQS$ .

- Q.6**  $\triangle ABC$  is an isosceles triangle with  $AB = AC$ . Side  $BA$  is produced to  $D$  such that  $AB = AD$ . Prove that  $\angle BCD$  is a right angle.
- Q.7** In Fig.  $AC = BC$ ,  $\angle DCA = \angle ECB$  and  $\angle DBC = \angle EAC$ . Prove that triangles  $DBC$  and  $EAC$  are congruent, and hence  $DC = EC$ .

- Q.8** If the altitudes from two vertices of a triangle to the opposite sides are equal, prove that the triangle is isosceles.
- Q.9** In  $\triangle ABC$ ,  $AB = AC$  and the bisectors of angles  $B$  and  $C$  intersect at point  $O$ . Prove that  $BO = CO$  and the ray  $AO$  is the bisector of angle  $BAC$ .
- Q.10** In Fig.  $BM$  and  $DN$  are both perpendiculars to the segments  $AC$  and  $BM = DN$ . Prove that  $AC$  bisects  $BD$ .
