Visually Impaired & Braille System

A. Choose the correct answer:

1. What is Braille?

(a) A type of glasses for the visually impaired

(b) A system of raised dots used for reading and writing

(c) A device that helps blind people walk

(d) A special font used on computers

2. Who invented the Braille system?

(a) Thomas Edison

(b) Louis Braille

(c) Albert Einstein

(d) Helen Keller

3. People with visual impairment are unable to:

(a) Hear sounds

(b) Walk properly

(c) See clearly

(d) Speak loudly

B. Fill in the Blanks:

1. Braille is read by touching _____ dots arranged in patterns.

2. Louis Braille invented the system in the year _____.

3. The Braille system helps visually impaired people to read and _____.

C. Case Study:

Anjali is a 12-year-old girl who is visually impaired. She has learned to read and write using the Braille system. Her teachers at school have provided her with Braille books, which allow her to study and do her homework. Anjali also uses a Braille slate and stylus to write messages.

Case Study Questions:

1. How does Anjali read and write, despite being visually impaired?

2. What is the role of a Braille slate and stylus in helping Anjali write?

3. How does the Braille system help visually impaired people in their daily lives?

D. Short Answer Questions:

1. What is the Braille system, and why is it important for visually impaired people?

2. How do raised dots in the Braille system help people read?

3. How can Braille books assist students with visual impairment in school?

E. Long Answer Questions:

1. Explain the Braille system and how it helps visually impaired people to communicate and learn.

2. Describe the tools used by visually impaired people to read and write. How do these tools make it easier for them to perform daily activities?

3. Discuss the importance of Braille education and how it contributes to the independence of visually impaired individuals.
