

Addition (Introduction)

Addition is a way of combining things and counting them together as one large group.

Here in the above picture 3 balls when we add 2 more balls, now the total no. of balls are 5.

That is, when we bring things together it is called **addition**.

We use '+' (plus) symbol for addition and the answer of addition is called 'sum'.

Look at another example:

We have 3 red and 2 green apples.

If I put all the apples in one basket then we will get 5 apples.

So we can write the above example as

3 apples

+

2 apples

=

5 apples
