

Properties of Zero

Subtracting zero (0)

You know if we add 0 to any number it remains unchanged.

That is $5 + 0 = 5$

Similarly when we subtract zero (0) from a number, the answer is the number itself. When nothing is taken away from a group. The number of objects in a group remains same.

For example:

I have 5 chocolates. I gave none to you.

How many chocolates are left with me?

-

None

=

5

-

0

=

5
