Addition and Subtraction
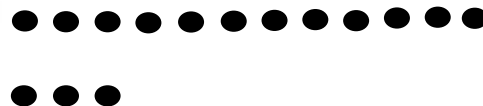

As we have already read in previous class about addition.

Let's understand how to add numbers using dots.

➡ **For Example:**

	12
+	3

15

First, we draw twelve dots then we draw 3 dots.

So, the total dots are **12 + 3 = 15**

In this way we can easily add the numbers.

☞ **Subtraction by crossing out sticks**

We can subtract the number using cross out the sticks.

➡ **For Example:**

	19
-	8

11

First, we draw sticks of bigger number given then we cross out sticks as smaller number given. So, **19 − 8 = 11**
