

Word Problems on Multiplication

⇒ Multiplication Word Problems are multiplication problems that are usually presented in the form of a sentence that generally relates to a real-life scenario.

Look at the examples:

There are 5 benches in a room. 2 children sit on each bench. How many children are sitting on all the benches?

There are 5 benches in a room.	=	$5 \times 2 =$ <input type="text"/>
2 children sit on each bench.	=	5 groups of 2 children each
Total children are sitting on all the benches	=	$2 + 2 + 2 + 2 + 2 =$ <input type="text" value="10"/>

⇒ **There are 5 rows and 6 columns of chairs in our class. How many students are there in my class?**

Number of rows	=	5
Number of columns	=	\times 6
Number of chairs in the class	=	<u>30</u>
