

The Diagram Details the Process of Making Wool

The diagram details the process of making wool. Summarise the information by selecting and reporting the main features, and make comparisons where relevant. It is suggested that about 20 minutes is spent on Task 1, which requires candidates to write at least 150 words.

Sample Answer of The Diagram Details the Process of Making Wool

The diagram illustrates one particular way to produce wool to manufacture carpets or jackets or for knitting. Looking from an overall perspective, it is readily apparent that this process comprises 4 main stages: collecting, drying, spinning, and storing for retail.

The first stage of this process is to shear the sheep to obtain its fur. Secondly, it is washed with water before being dried. Next, dried fur is spun with the product being wool and the byproduct being a string, which is then sent to factories to be recycled.

The tufted wool, which is formed by many pieces of wool, is stored in large numbers before being sold to the customers or clothing industries in the form of balls. Those balls of yarn are finally used for knitting and manufacturing jackets and carpets.
