

## Details the Process of Making Clothes From Plastic Bottles

*The diagram details the process of making clothes from plastic bottles. Summarise the information by selecting and reporting the main features and make comparisons where relevant.*

The yielded diagram demonstrates how clothes are made from plastic bottles.

Overall, it can be seen that this process has various stages, from collecting bottles to cutting, yarn and make clothes.

In the first stage, plastic bottles are primary requirements; thus, it collects and transfers to factories by trucks or lorry. Afterwards, plastic bottles are sorting by different criteria such as colour, material, size etc., in the next stage, and sorted bottles are cut down and make into small pieces.

Later, small pieces wash with water and dry in the sunlight. In the subsequent stage, bottling the dried plastic small pieces and straining for the next process. After straining it, as a result, get yarn which is used for making clothes. Awaiting yarn and rolling it. In the final stage, clothes are made from the role of yarn.
