

All Living Things

 The main difference between living things and nonliving things is that living things they grow.

Nonliving things do not grow.

The developing process is in seed also. It is as below:

-  A. Seed grows into seedling.
B. Seedling grows into sapling.
C. Than it grows into a big plant.

A baby also grows into an old man. We can see birds grow from a small egg. Once the egg hatches and little birds come out of the egg and grows into a big bird.
