

## Parts of Plants

A plant has many parts. The main parts are: **the roots, the leaves, the branches, the flowers and the stem.** Each part has a set of jobs to do to keep the plant healthy. The roots absorb water and minerals from the soil and anchor the plant in the ground. The stem supports the plant above ground, and carries the water and minerals to the leaves.

### Root:

- A. It absorbs water for the rest of the plant.
- B. Slowly stem transports materials between the leaves and roots.
- C. To trap sunlight makes the plant able to make food.
- D. It supports leaves, stems, and roots to make up a plant.

### Stem:

- A. The stem is important part of the plant which bears branches.
- B. The stem has two purposes.
- C. Stems transport materials between the leaves and roots.
- D. The leaves and flowers are supported by stems.
- E. Stems are a very important part of the plant.

## Parts of Plants

### Leaves:

- A. One of the basic parts of the plant is the leaves.
- B. The leaves have two functions.
- C. Trapping sunlight is important for the leaves to do.
- D. In the leaf the plants make their own food there.
- E. These are green in colors.

### Flowers:

- A. We see flowers in different colors.
- B. They varies in shapes and sizes.
- C. They develop into fruit or seeds.

### Seeds:

- A. They are like fruits.
- B. They grow into new plants after germination.
