

Animals Notes

INTRODUCTION

There are different kinds of animals around us. Animals are found everywhere. They live on land and in water.

Every Animal is different from the other in shape, size and behaviour.

Depending upon their structure and place of living, animals are divided into different groups.

LAND ANIMALS

These animals live on land. They have well developed limbs to walk on land.

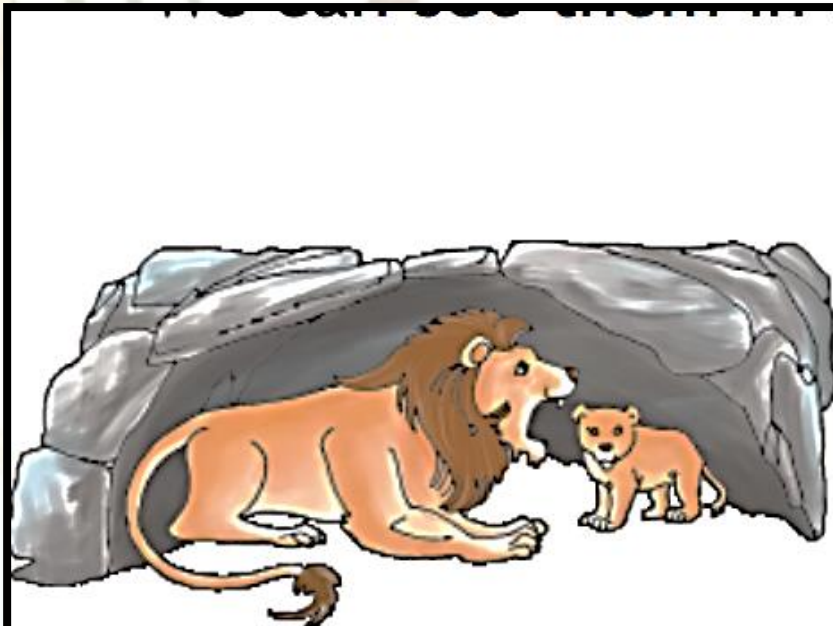

The land animals are further divided into two groups.

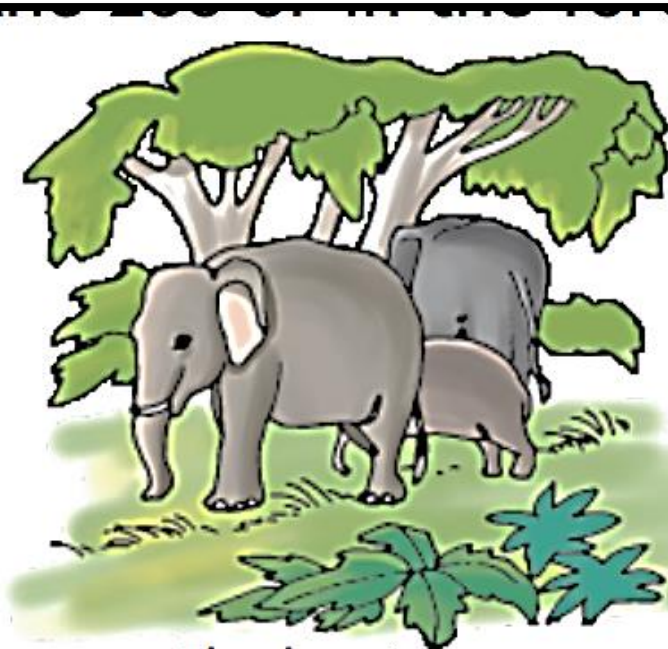

1. Wild Animals

These animals live in the forests. We cannot tame these animals.

We can see them in the zoo or in the forest.

Lion

Elephant

Deer

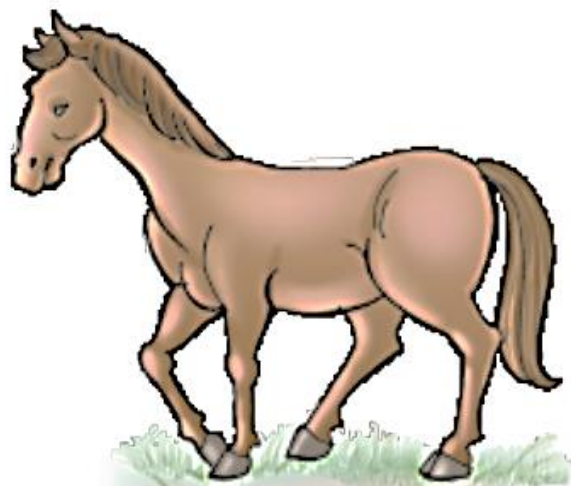

2. Domestic Animals

These animals are domesticated for our use.

Domestic animals help us in many ways. They are very useful to us.

Dog

Horse

Cow

WATER ANIMALS

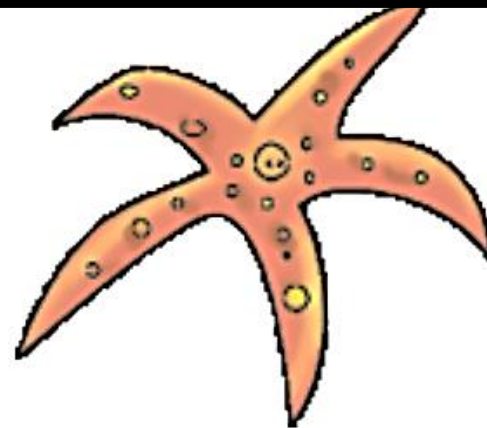

These animals live in water. These animals have special organs to swim in the water. They have fins and tentacles to swim.

Octopus

Fish

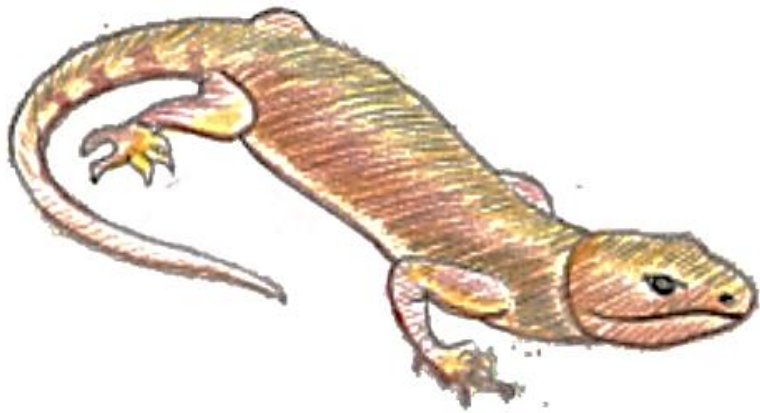

Starfish

AMPHIBIANS

Some animals live both on the land and in the water. The animals who can live both on the land and in the water, are called the amphibians.

Salamanders

Frog

Toad

BIRDS

Birds have feathers to fly in the air. All birds have a beak. Birds do not have teeth. Most of the birds can fly. There are some birds that cannot fly. They are called flightless birds. Penguin, Emu, Ostrich are such flightless birds.

Pigeon

Parrot

Penguin

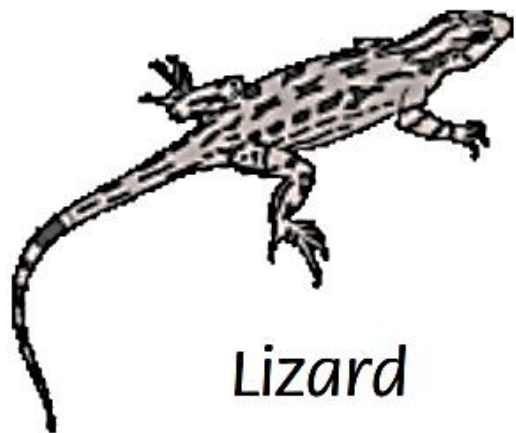

Ostrich

REPTILES

Reptiles are the animals that crawl on the ground. Animal like lizard, crawl through its limbs. Snakes do not have limbs.

Lizard

Snake

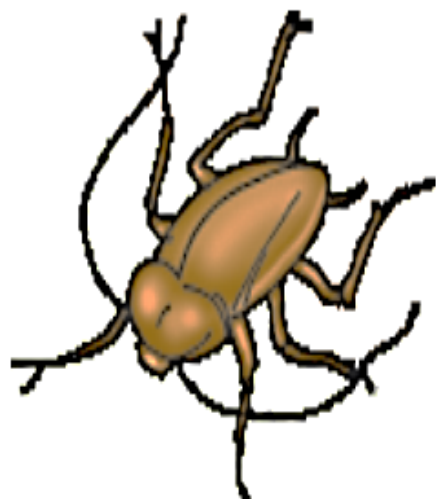

Chameleon

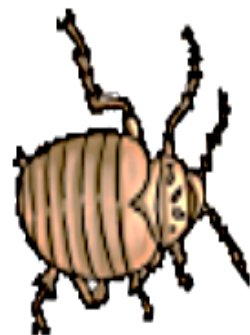

INSECTS

Insects are very small creatures. They are found everywhere.

Some insects have wings. They fly in the air. Some insects cannot fly. All insects have antennae and six or eight legs.
