

Features of Living Things

As the name suggest, living things have life in them and they constantly move and change their features. Some essentials features of living things are summarized below:

- A. Living things breathe continuously although different beings have different mechanism of breathing such as through lungs, gills, air tubes etc.
- B. Living things constantly show movement either by walking, running, swimming, flying etc.
- C. As living things grew older their shape and size increases and become old and finally die.
- D. To stay alive, living things need nutrition which comes from their food. All livings things remain alive through food chain.
- E. Through their sense organs living things feel everything and respond accordingly.
- F. All living beings follow the process of reproduction and give birth to babies. Although new plants grow from seeds.
