

## On the Basis of Lifespan

On the basis of life span they are divided into three parts:

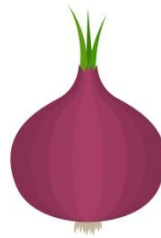

### **Annuals:**

Some plants grow in a particular season examples are paddy, wheat.

### **Biennials:**

Some plants can grow in more than one season, in first season only stem and leaves develop while in the next season fruits and flower develop e.g. onion, tulip.

### **Perennials:**

Some plants live for many years but give fruits for a particular time period. E.g. coconut, neem.
