

Mammals

Mammals include humans and all other animals that are warm-blooded with hairs. They feed their young ones with milk and have a more well-developed brain than other types of animals. A mammal is an animal that breathes air, has a backbone, and grows hair at some point during its life.

In addition, all female mammals have glands that can produce milk. Mammals are among the most intelligent of all living creatures. Mammals include a wide variety of animals, from cats to humans and to whales.
