

## Shoot

The upper part of the plant that grows above the ground is called shoot. It contains various parts such as:

### STEM

It is the central region of plant. In some plants the stem is hard and in some plants the stem is soft. The stem is the part of the plant which is found above the ground. The bark of trees is brown in color and younger stems are green in color. It forms the basis of the shoot system and bears leaves, fruits and flowers.
