

Addition of Kilograms and Grams

⇒ Addition of Weights

Example: Add 4 kg 960 g and 3 kg 527 g.

Solution:

⇒ **Step 1:** Write the numbers one below the other in columns of kg and g.

	kg	g
	4	960
+	3	527

Step 2: Add grams $960 + 527 = 1487$ grams = 1 kg + 487 g. Write in 'g' column and carry over 1 to the kg column.

Step 3: Add kilograms $4 + 3 + 1 = (\text{carried over}) = 8\text{kg}$.

Write 8 kg in the kilograms column. Thus, the answer is **8 kg 487 g**.
