

Addition of Numbers

➡ We have already learnt about the addition of 2 and 3 digit numbers without and with regrouping and addition facts. Before moving further let's recall it.

The answer in addition is called **sum**.

While doing addition, arrange the numbers in the columns of ones, tens and hundreds, then add the ones, tens and then hundreds.

When you add zero to any number, the sum is the number itself. **$53 + 0 = 53$**

When you add 1 to any number, the sum is the next number. **$32 + 1 = 33$**

Numbers can be added in any order, their sum will remain the same.

$$2 + 3 = 5$$

$$3 + 2 = 5$$

You can regroup 10 ones as 1 ten and 0 one.

You can regroup 10 tens as 1 hundred and 0 ten.
