

Addition

➡ Addition of Units of Length

For addition of lengths, note the following points.

- Make the columns according to the units of the addends.
- Write the numbers one below the other in the columns of their respective units.
- Write the answer separately along with the units.

➡ Addition of lengths given in kilometers and meters.

Example 1: Add 47 km 576 m and 13 km 185m.

Steps of Addition:

Step 1: Write the numbers vertically in columns of km and m.

Step 2: Add meters, that is, $576 + 185 = 761$ m. Write 761 in the 'm' column.

Step 3: Add kilometers, that is, $47 + 13 = 60$ km. Write 60 in the 'km' column.

km	m
47	576
13	185
+	
60	761

Thus, the answer is 60 km 761 m.
