

## Excretory System

Excretory system is a passive biological system that removes excess, unnecessary materials from the body fluids of an organism, to maintain body balance. It helps to remove these various waste materials from the body.

The main organs of excretory system are the kidneys, skin and lungs. Kidneys are bean-shaped structure that help to keep our blood clean. The wastes are thrown out of the body in the form of urine. It also throws out excess of water and salts.
