

Nervous System And Reproductive System

The nervous system is a network of neurons whose main feature is to generate, modulate and transmit information between at the different parts of the human body. It mainly includes CNS and PNS.

All the organs work together to keep us alive. Brain orders each part of the body through the nerves what work to be done. Nerves are like wires. Messages from all parts of the body also comes to the brain through nerves.

Human Nervous System

For example: When your eyes see a ferocious cat running towards you, it immediately sends message to the brain. Brain immediately order your legs to run fast.

The main function of the reproductive system is to produce off springs. By this system the continuity of life on earth is maintained. Reproductive System is responsible for producing babies. Man and woman have different reproductive organs.
