

## Heat Energy

Heat energy is used to cook food. We can get heat energy by burning fuel such as wood, gas, petrol and coal. It also changes water to steam, and make steam engine move. Sun is the natural source of the heat energy.

### ⇒ Solar energy

Sun is the greatest source of energy on the earth. The energy from the sun is called solar energy. Plants use this light energy to make food for the entire living world. So, the energy we get from food also comes from the sun. Our solar equipments like solar water heater, solar cooker, solar calculator etc work by using the solar energy.
