

In Case of Severe Burn

We should take care of the following things in case of severe burn-

- A. Severe burns can cause blisters on the skin if not cured properly and can cause infection, so don't prick a blister.
- B. Help the victim to calm down by making him drink some water.
- C. Never try to give water to an unconscious person.
- D. Apply a wet compress by a sterile cloth dipped in baking soda.
- E. Gently and very carefully cover the burned area with a sterile gauze or cloth for protection from dust and germs.
- F. Immediately take the victim to hospital or consult a doctor.
