

Introduction Of Plants

We see a huge variety of plants all around us. The plants need soil, water, air, shelter and adequate climate, to survive. Plants grow in various places. They grow in cold places as well as hot and dry places. They also grow in fresh water of rivers and salty water of the sea .

Among which few are terrestrial and aquatic plants. Despite this fact they all have same functions, they appear unique with different types of roots, stems, leaves, flowers, fruits , seeds etc. Therefore, the different types of plants are mainly based on several factors such as their habitat, adaptation etc. Let us discuss about the types of plants and how they adapt themselves.
