

## Plants In Marshy Places

There are also some plants which have breathing roots that grow above the soil. The place where such plants grow is called as marshy place. In these areas water collects in the soil and cannot drain away. Roots of these trees do not get air from the soil. The marshy places have clay soil which can store lots of water. E.g. Mangrove trees.

## Plants In Marshy Places

### 1. Plants in hot and humid regions-

Some plants are evergreen and does not shed their leaves. These plants grow in hot and humid regions. E.g. Coffee plant, Coconut plants etc. Coffee plants need warm and moderate climate. Coconut trees grow well on the sea coast
