

Introduction of Matter

What is Matter?

Whatever you see, touch/feel or smell is matter. But fire, light and heat are not matter. Most of the matter can be classified as solid, liquid or gas. The things which have weight and occupy space are called the matter .

All living things like animals and plants are matter and the non-living things like chair, bus, etc. are matter. Feelings and emotions of the living things are not matter. Matter can change state which might be reversible or irreversible. Matter can change state with a change in temperature and these changes are often reversible.

STATE OF MATTER
