Subtraction of Decimals

➡ **We have to follow same steps in subtraction of decimals as we have seen in Addition.**

Step 1: Change the given decimal into like decimals.

Step 2: Write the numbers in columns, so that decimal points should come in one column.

Step 3: Now, subtract the decimals just as we subtract the whole numbers.

Step 4: Put the decimal in the sum directly under the decimal points of all the decimals.

➡ **Let us understand with an example:**

Example: Subtract 36.314 from 49.69.

Solution: Converting into like decimals.

49.69 = 49.690

36.314 = 36.314

Hence, 49.69 − 36.314 = 13.376

	49.	690
−	36.	314
	13.	376
