

Uses of Air

Air helps in maintaining the temperature on the earth's surface by circulating hot and cold air. Air acts as a conductor of heat. There are many uses of air. Some uses are as below:

- A. The process of the water cycle is also dependent on air.
- B. Air is needed for breathing.
- C. Plants use carbon dioxide from the air to prepare their food and releases oxygen.
- D. Burning of anything is only possible in the presence of oxygen that is freely available in the air.
- E. Air is also needed for inflating tyres for automobiles, tubes and footballs.
- F. It also supports in, sailing boats and generating electricity, by moving the blades of a windmill.
