

## Prevention of Soil Erosion

- A. Don't leave soils bare.
- B. A bare soil is particularly unsafe to erosion.
- C. Soil digging, stirring and overturning is one of the most practised methods of preparing the land for growing crops.
- D. Watch out for overgrazing.
- E. Building terraces on hillsides.
- F. Planting more trees to bind the soil together.
- G. Make wind brakes.
- H. Using fertilizers in overpopulated areas to make the soil more fertile.
