

# Soil Erosion

## Human Factors of Soil Erosion

- ➡ A. Soil erosion is common in areas with steep slopes, where trees have been felled, in droughts because of poor crop and in areas which are overpopulated.
- B. Though erosion is a natural process, human beings and activities like industrial growth, agriculture, deforestation and urbanization also causes erosion.
- C. Land that is used for industries and agriculture generally experiences a greater erosion than that land which is under natural vegetation, or land used for sustainable agriculture practices.
- D. Reduction in vegetation cover on the surface of soil disturbs the soil structure.
