

## Factors on Which Structure Depends – Climatic Condition

- A. Houses are of different style and structure.
- B. As we know different places have different climatic conditions.
- C. Houses have thick walls and flat roofs in places where climate is hot.
- D. The reason of flat roofs is that people use the roofs to sit or sleep outside.
- E. In flood-prone areas houses are built a few feet above the ground.
- F. In hilly areas have sloping roofs that do not allow rainwater and snow to collect and damage the house ceilings.
- G. In colder areas they have fireplaces to keep the houses warm.
