

Introduction of Houses

House

A house is a building for people to live in. It is usually built for a family (parents and their children). Most modern houses have special areas or rooms for people to do the things that they need to live comfortably. A modern house has a place to cook food, a place to eat, place to sleep and a place to wash.

You must have heard about different types of houses like wood houses, mud houses, cemented houses, houses with flat roofs, houses with sloping roofs etc. These houses are so different from each other. There are several factors that influence the basic structure of a house.

The main factors which affect the structure of the house are:

1. Climate
2. Materials used
3. Budget of an individual
