

# Skull

- A. Skull is the bone present in our head.
- B. It is made of 22 bones. Out of these 22 bones 14 are the facial bones which enable us to eat and talk as these bones make the lower jaw movable. The remaining 8 bones are interlocked together and protect the delicate brain, by enclosing it.
- C. This structure basically supports the structure of face as well as it also forms the cavity of brain.
- D. The skull is composed of two set of bones-cranial and facial bone that totals to 22 bones.
