

## Bar graphs

A bar graph or a bar chart is a way of representing the data through bars of different heights.

**Let us understand with an example:**

**Example:** The student of primary wing of a school went to visit a zoo. Study the following Bar Graph and answer the given questions:

1. How many students went to the zoo?

**Ans.**  $15 + 10 + 30 + 40 + 25 = 120$ . Thus 120 students visited zoo.

2. Which of the class has 40 students?

**Ans.** Class IV has 40 students.

3. How many students of class V went to the zoo?

**Ans.** 25 Students of class V went to the zoo.

4. How many classes had less than 40 students going to the zoo.

**Ans.** Four classes had students less than 40 going to the zoo.
