

Water, Our Lifeline

Water is often referred to as the "elixir of life" because it is an essential element for all living organisms on Earth. It plays a crucial role in sustaining life and maintaining the delicate balance of our planet's ecosystems. This one-page note explores the importance of water as our lifeline, highlighting its significance in various aspects of our lives.

- Water is one of the most essential substances for life on Earth.
- Covers about 71% of the Earth's surface.
- Plays a crucial role in various ecosystems and is essential for all living organisms.
- The water which comes from the kitchen sink, bathroom, toilets, etc. goes out into the drain is dirty water.

1. This used water that contains pollutants is called wastewater.
2. This used water should not be wasted and can be reused after removing pollutants.
