

Predecessor and Successor

 **Predecessor**- The number obtained by subtracting 1 from a whole number (other than 0) is called the predecessor of that whole number.

Let's see some examples:

The predecessor of 89999 is: $89999-1 = 89998$

The predecessor of 100000 is: $100000-1 = 99999$

 **Successor**- The number obtained by adding 1 to a whole number (other than 0) is called the successor of that whole number.

Let's see some examples:

The successor of 9999 is: $9999+1 = 10000$

The successor of 10006 is: $10006+1 = 10007$

Predecessor	Numbers	Successor
30,87, 891	30,87,892	30,87,893
9,82,37,460	9,82,37,461	9,82,37,462
