Introduction of Fraction Number

☞ A fraction is a number which represents/indicates a part or parts of a whole or part of a collection.

A fraction comprises two numbers separated by a horizontal line. The number above the horizontal line is called the numerator and the number below the horizontal line is called the denominator of the fraction.

☞ **Example of Fractions:**

$$\frac{5}{8} \begin{array}{l} \longrightarrow \text{Numerator} \\ \longrightarrow \text{Denominator} \end{array} \quad , \frac{2}{3} , \frac{7}{5}$$
