

## Introduction to Fraction

A fraction is a number which represents/indicates a part or parts of a whole or part of a collection.

A fraction comprises two numbers separated by a horizontal line. The number above the horizontal line is called the numerator and the number below the horizontal line is called the denominator of the fraction.

### Example of Fractions:

$$\begin{array}{lcl} \frac{5}{8} & \xrightarrow{\quad} & \text{Numerator} \\ & \xrightarrow{\quad} & \text{Denominator} \end{array} \quad , \quad \frac{2}{3} , \frac{7}{5}$$
