

## Making of Fabrics

The processing of cotton involves Ginning, Spinning, Weaving and Knitting.

### Ginning

The plant from which cotton is picked contains seeds. The processing of removing these seeds from cotton pods is known as ginning.

Ginning can be done using hands or by machines.

### Spinning

The process of making yarn from thin strands of fibres is called spinning.

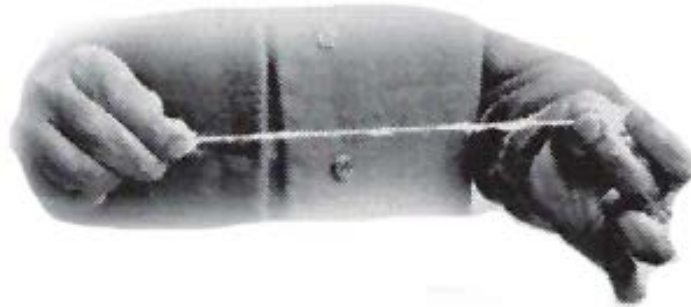

It can be done by hand or on a spinning wheel.

### Weaving

Two distinct yarns are arranged together on weaving machines, known as looms, to make a fabric.

# Making of Fabrics

## Fabrics

Fabrics are woven material or textile.

It is prepared from yarns by weaving or knitting.

Example: Blankets, towels, curtains, etc.

Knitting

Hand knitting is a conventional method of knitting, though it is also done on machines. For example, sweaters are knitted from wool.

## Evolution of clothing

Flax fibres were the first to be put to use as clothing followed by cotton.

In modern days, clothing became mechanized, where machines have more to do with making clothes.
