

Getting To Know Plants

Introduction of Plants

Plants are all around us on earth. They are helpful to sustain life on earth by creating food and giving out oxygen that we breathe in.

Plants

Plants are the immovable living organisms all around us.

They are the primary food providers.

They are mostly green in colour and use sun as the source of energy to make food.

Herbs, shrubs and trees

Herbs are the smallest plants and do not have woody stem.

Shrubs are slightly larger than herbs.

Trees are the largest plants and can have large and thick woody stem.

Creepers and climbers

Creepers and Climbers are those types of plants, which need support to grow.

Algae and mosses

Algae and mosses are the most primitive or simple plants.

Algae are found mostly floating on water and mosses are seen on surfaces, rocks or bark of trees in humid conditions.
