

Introduction to Integer

⇒ The system of whole numbers together with negative numbers are called integers i.e., $-4, -3, -2, -1, 0, 1, 2, 3, 4, \dots$

Positive Integers: The natural numbers $1, 2, 3, 4, \dots$ are called positive integers.

Negative Integers: The numbers $-1, -2, -3, -4, \dots$ are called negative integers.

'Zero' is an integer which is neither positive nor negative. In real life, integers are used to represent opposite situations.

⇒ **For Example:**

An aeroplane is 1000 m above the ground level = +1000

A fish is 1000 m below the ground level = -1000

Deposit of Rs.7000 in your bank account = +7000
