CLASSIFICATION BASED ON ALPHABET

Classification is the process of grouping various objects on the basis of their common properties like shape, size, category, color, trait, etc. and finding the odd object from the group. The questions contain a set of different items and candidates are asked to find the odd item out of the given ones. All the items except one follow a certain rule or pattern or they possess some common qualities or characteristics between them and one which is odd does not possess the common qualities or characteristics.

CHOOSING THE ODD LETTER GROUP

In this type of classification reasoning , candidates will be given some odd letters then they have to find out the wrong one.

Question 1: Choose the letter pair which is different from others in the group.

1. BD
2. IK
3. PN
4. SU

Solution: Clearly, all the groups consist of two alternate letters in order, while in the group they are in reverse order.

Hence, the correct answer is PN.
